

Vaccine May Be More Dangerous Than Swine Flu

By Dr. Russell Blaylock MD, Neurosurgeon - July 7, 2009

“...Despite predictions of massive numbers of deaths and the arrival of doomsday, the virus has remained a relatively mild disease, something we know happens each year with flu epidemics. Worldwide, there have only been 311 deaths out of 70,893 cases of swine flu. (as of 7/7/09) In the United States, 27,717 cases have resulted in 127 deaths. Every death is a tragedy, but such a low death rate should not be the basis of a draconian government policy. It is helpful to recall that the Centers for Disease Control with the collusion of the media, constantly tell us that 36,000 people die from the flu each year, a figure that has been shown to be a lie. In this case, we are talking about 300 plus deaths for the entire world. This virus continues to be an enigma for virologists. In the April 30, 2009 issue of Nature, a virologist was quoted as saying, ‘Where the hell it got all these genes from we don’t know.’ Extensive analysis of the virus found that it contained the original 1918 H1N1 flu virus, the avian flu virus (bird flu), and two new H3N2 virus genes from Eurasia. Debate continues over the possibility that swine flu is a genetically engineered virus. Naturally, vaccine manufacturers have been in a competitive battle to produce the first vaccine. The main contenders have been Baxter Pharmaceuticals and Novartis Pharmaceuticals, the latter of which recently acquired the scandal-ridden Chiron vaccine company. Both of these companies have had agreements with the World Health Organization to produce a pandemic vaccine. The Baxter company has been associated with two deadly scandals. The first event occurred in 2006 when hemophilic components were contaminated with HIV virus and injected in tens of thousands of people, including thousands of children... The second event occurred recently when it was discovered that Baxter had released a seasonal flu vaccine containing the bird flu virus to 18 countries, which would have produced a real world pandemic. Fortunately, astute lab workers in the Czech Republic discovered the deadly combination and blew the whistle before a worldwide disaster was unleashed. Despite these two deadly events, WHO maintains an agreement with Baxter Pharmaceuticals to produce the world’s pandemic vaccine. Novartis, the second contender, also has an agreement with WHO for a pandemic vaccine. Novartis appears to have won the contract, since their vaccine is near completion. (GlaxoSmithKline has the contract for Canada) What is terrifying is that these pandemic vaccines contain ingredients, called immune adjuvants that a number of studies have shown cause devastating autoimmune disorders, including rheumatoid arthritis, multiple sclerosis and lupus. Animal studies using this adjuvant have found them to be deadly. A study using 14 guinea pigs found that when they were injected with the special adjuvant, only one animal survived. A repeat of the study found the same deadly outcome. So, what is this deadly ingredient? It is called squalene, a type of oil. The Chiron Company, maker of the deadly anthrax vaccine, makes an adjuvant called MF-59 which contains ... squalene.... A number of studies have shown that squalene can trigger all of the above-mentioned autoimmune diseases when injected....I reviewed a number of studies on this adjuvant and found something quite interesting. Several studies done on human test subjects found MF-59 to be a very safe immune adjuvant. But when I checked to see who did these studies, I found—to no surprise—that they were done by the Novartis Pharmaceutical Company and Chiron Pharmaceutical Company, which have merged. They were all published in “prestigious” medical journals. Also, to no surprise, a great number of studies done by independent laboratories and research institutions all found a strong link between MF-59 and autoimmune diseases. Squalene in vaccines has been strongly linked to the Gulf War Syndrome... On August 1991, Anthony Principi, Secretary of Veterans Affairs admitted that soldiers vaccinated with the anthrax vaccine from 1990 to 1991 had an increased risk of 200 percent in developing the deadly disease amyotrophic lateral sclerosis (ALS), also called Lou Gehrig’s disease. The soldiers also suffered from a number of debilitating and life-shortening diseases, such as polyarteritis nodosa, multiple sclerosis (MS), lupus, transverse myelitis (a neurological disorder caused by inflammation of the spinal cord), endocarditis (inflammation of the heart’s inner lining), optic neuritis with blindness and glomerulonephritis (a type of kidney disease). Because squalene, the main ingredient in MF-59, can induce hyper-immune responses and induce autoimmunity, a real danger exists for prolonged activation of the brain’s immune cells, the microglia. This type of prolonged activation has been strongly associated with such diseases as multiple sclerosis, Alzheimer’s disease, Parkinson’s disease, ALS and possibly vaccine-related encephalitis. It has been shown that activation of the systemic immune system, as occurs with vaccination, rapidly activates the brain’s microglia at the same time, and this brain inflammation can persist for long periods.... What most people do not know, even the doctors who recommend the vaccines, is that most such studies by pharmaceutical companies observe the patients for only one to two weeks following vaccination—these types of reactions may take months or even years to manifest. It is obvious that the vaccine manufacturers stand to make billions of dollars in profits from this WHO/government-promoted pandemic....One must keep in mind that once the vaccine is injected, there is little you can do to protect yourself—at least by conventional medicine. It will mean a lifetime of crippling illness and early death. There are much safer ways to protect oneself from this flu virus, such as higher doses of vitamin D3, selective immune enhancement using supplements, and a good diet. (Investigative journalist, Gary Matsumoto, did a brilliant exposé of squalene in vaccines: ‘Vaccine A’)

H1N1 Vaccine, Squalene and Anti-Viral Medications: What are the Long-Term Risks?

"A warning that the new swine flu jab is linked to a deadly nerve disease has been sent by the government to senior neurologists in a confidential letter. The letter from the health protection agency...has been leaked to The Mail on Sunday leading to demands to know why the information has not been given to the public before the vaccination of millions of people, including children begins."

'Swine Flu Jab Linked to Killer Nerve Disease', Jo MacFarlane, Daily Mail (England), 8/15/09

"According to a recent review... most newer adjuvants including MF-59, ISCOMS, QS21, ASO2 and ASO4 have 'substantially local reactogenicity and systemic toxicity'... In animal studies of oil-based (vaccine) adjuvants in rats, the animals were rendered crippled and paralyzed. Squalene brought on severe arthritis symptoms in rats, and studies in humans given from 10-20 ppb (parts per billion) of squalene showed severe impact and development of autoimmune disorders."

'Fast-tracked Swine Flu Vaccine Under Fire,' 8/09, Dr. Mae-Wan Ho, Geneticist, Director, Institute of Science in Society, London, England and Dr. Joe Cummins, Professor Emeritus, University of Western Ontario

"Squalene is a natural substance found in most plants and animals. Your body uses it to help synergize cholesterol as well as vitamin D... However, when commercial squalene is *injected*, the body identifies it as a threat and creates antibodies to attack it... In fact, when scientists from Tulane University tested blood samples from vets suffering Gulf War Syndrome, they found that 100% of them had abnormal antibodies to squalene... Symptoms of GWS were subtle to start: headaches, fatigue, generalized aches and pains... This is what worries me about the H1N1 vaccine, reactions can take years to appear making it difficult to connect the dots."

'Serious Reasons to Skip the H1N1 Vaccine, Part II', Allan Spreen MD, Health Sciences Institute Advisory Panel, Baltimore, Maryland

"This adjuvant (*squalene*) contributed to the cascade of reactions called Gulf War Syndrome documented in soldiers in the Gulf War... The symptoms they developed included: arthritis, fibromyalgia, lupus erythematosus, ALS, chronic fatigue, neuropsychiatric problems, seizures, chronic headaches... memory loss, anti-thyroid effects, rashes..." Viera Scheibner PhD, Scientific Researcher and Author

"This is the worst cover-up in the history of the military. It's not the shot from the gun but a shot from a syringe that is leaving some servicemen and women on the brink of death." 'Secret Shots', Target 5 WLWT TV Investigative Report

"Vaccines themselves can be dangerous especially live attenuated viral vaccines or the new recombinant nucleic acid vaccines. They have the potential to generate virulent viruses by recombination and the recombinant nucleic acids could cause autoimmune diseases."

Dr. Joe Cummins, Professor Emeritus of Genetics and Dr. Mae-Wan Ho, Geneticist (see 2nd quote above)

"It's been documented that the live viruses from the vaccine can be shed and potentially spread into the community for 21 days... Between 10 million and 100 million viral particles will be forcefully injected into the nostrils..." Dr. Sherri Tenpenny, 'Risks of FluMist Vaccine'

"The world and, in particular, its children appear to be at risk for stealth adapted viruses. The contribution of vaccines to the *formation* and *dissemination* of these viruses should be an open topic for scientific discussion. This is not occurring with those presently in charge of overseeing the safety of the nation's immunization program." W. John Martin MD, PhD, Founder, Center for Complex Diseases

"It's not the swine flu that is dangerous. It's the injections... I hope no one takes this injection especially not pregnant women or children." Dr. Rauni Kilde, Retired, Chief Medical Officer, Finland

"Washington State health officials have temporarily suspended limits on the amount of mercury allowed in the upcoming H1N1 influenza vaccine for pregnant women and children younger than three." John Stucks, The Spokesman-Review, 9/25/09

"ANIMAL REPRODUCTION STUDIES HAVE NOT BEEN CONDUCTED WITH FLUZONE. IT IS ALSO NOT KNOWN WHETHER FLUZONE CAN CAUSE FETAL HARM WHEN ADMINISTERED TO A PREGNANT WOMAN OR CAN AFFECT REPRODUCTION CAPACITY ... FLUZONE HAS NOT BEEN EVALUATED FOR CARCINOGENIC OR MUTAGENIC POTENTIAL OR FOR IMPAIRMENT OF FERTILITY."

Vaccine Package Insert for Sanofi Pasteur's Fluzone seasonal flu vaccine (Similar inserts for Novartis Fluvirin & GlaxoSmithKline Flulaval
* All seasonal flu vaccines are classified by the FDA, as Category C, as are all Swine Flu Vaccines. Category C means either animal studies have revealed adverse effects on the fetus and there are no controlled studies in women, or studies in women and animals are not available)

"CARCINOGENICITY – WE HAVE DONE NO TESTING FOR THE CARCINOGENICITY OF MF-59 OR ANY OF OUR VACCINES. WE HAVEN'T DONE IT AND WE DON'T PLAN TO." Dr. Novicki, Scientist, Novartis Pharmaceuticals, F.D.A.-N.I.H. Meeting, 12/2008

"Clinical trials will be limited due to the need to provide the vaccine to governments as quickly as possible. Additional testing of safety and efficacy will need to take place *after* administration." GlaxoSmithKline Pharmaceutical Company Statement (To be used in Canada)

"Canada is protecting the drug maker of the swine flu vaccine from lawsuits... but will not shield health practitioners who make mistakes administering it." 'Canada Will Protect Swine Flu Vaccine Makers', Toronto Star, 9/30/09 (i.e. blame the doctor, not the vaccine)

"The vaccination made me ill... On the third day my kidneys and head were aching... I then had a coughing fit and the wash basin was suddenly red – it was blood." 'Swine Flu Vaccination: An Injured Subject Speaks Out', Nina Bautz, Global Research, 9/16/09

"Tamiflu has been linked to thousands of cases of abnormal behavior, neuropsychiatric problems like convulsions, delirium or delusions; and brain infections. Reuters 3/21/07 (Links have also been made to suicides, especially in Japan where Tamiflu has been widely used)

"The patient deteriorated and was on life support. The family was told nothing could be done... The hospital was pushed hard to give him IVC... The patient continued to recover. He was now conscious." Dr. J. Mercola, 'IV Vit. C Used to Recover Terminal Swine Flu Patient', 9/24/09

"There were seven times more disease among the vaccinated soldiers than the unvaccinated civilians and the diseases were those they'd been vaccinated against." Eleanor McBean PhD, 'I was an on the spot observer of the 1918 flu epidemic' Author, 'The Poisoned Needle'
